

STANDARDS FOR TRASH ENCLOSURES

Acceptable finish materials for trash enclosures shall include:

Trash enclosure finish is to match new building finish and colors and may use either split-face block with decorative cap or slump-stone with decorative cap.

All other materials shall be reviewed and approved by the City Engineer.

Doors may not use any "unfinished" materials such as chain-link, aluminum, fiberglass, plywood, corrugated plexiglass, siding, etc. Approved materials for trash enclosure doors include those that are decorative in nature and that fully screen the trash bins from public view.

Landscape screening is required around all trash enclosures.

On commercial lots, all trash enclosures must be located at least 25 feet away from residentially zoned properties.

Standard for determining the required number of trash enclosures:

Refer to Planning Division for details.
